

WINKIE NG

Industrial & Graphic Designer

ng.winkie@yahoo.com / <https://winkie.ng>

EDUCATION

Simon Fraser University

Sep 2018 - Dec 2023

School of Interactive Arts and Technology - Design Concentration, Print and Digital Publishing Minor

WORK EXPERIENCE

Zen Maker Lab / Multimedia Designer & Production Coordinator

May 2021 - May 2022

- Collaborated with the design team to create the company's mascot and various products for course content by using Illustrator, including illustrations, for achievement booklets, stickers, mats, and posters.
- Assisted the marketing team in producing advertising materials and partnered with local stores to design laser-cut cup coasters and keyholders by using Illustrator and InDesign.
- Worked with the engineering team to develop course activities and provided design recommendations to enhance the user experience of our products.
- Received orders from both internal and external clients to design, print, and fabricate a diverse array of items, encompassing wooden, 3D-printed, and metal pieces by using SolidWorks, Fusion 360, and TinkerCAD.

CREATIVE EXPERIENCE

Falling Eclipse / Product Design & Fabrication / Academic Case Study

May - Aug 2022

- Created a speaker that aim to help insomnia sufferers achieve good-quality sleep and establish a healthy sleep routine without taking up excessive space.
- Collaborated closely with the fabrication department to discuss the material characteristics and receive suggestions on how to utilize them.
- Led the visual design, 3D modeling, and fabricating stages. The illustration was created using Illustrator, and the 3D model was crafted using Maya

Bloom / Architectural Designer / Academic Case Study

Jan - Apr 2022

- Created a pavilion and pergola intended for use in hosting parties and ceremonies at Holland Park, Surrey, BC.
- Conducted field trips to investigate the terrain and surroundings to ensure the optimal location and account for human factors.
- Led the 3D modeling, VR walkthrough, and fabricating stages. The 3D model was created using Rhino, and the VR walkthrough was developed using Twin Motion. Foam and wires were used for the physical model.

A Clown On A Unicycle / Toy Design Engineer & Fabrication / Academic Case Study

Jan - Apr 2020

- Created a toy with mechanical motion intended bring joy and cheer to the kids who interacted with it.
- Led the visual design, 3D modeling and fabricating stage. The 3D model was designed using SolidWorks. MDF, PLA and felt were used for the physical model.
